Zeeshan Iqbal

.NET / Unity Developer | C# · C++ · Unity · Backend Integration · AR/VR · WebGL

zeeshaniqbal575@gmail.com | +92 311 6743575 | Lahore, Pakistan (open to remote & relocation)

PROFESSIONAL SUMMARY

Software Engineer with 5+ years of commercial experience building production Unity applications and .NET / C# software across the full development lifecycle from architecture and implementation through to testing, documentation, and live support. Strong background spanning both enterprise .NET development (WinForms, SQL, REST APIs) and interactive application development (Unity, C#, C++, WebGL, multiplayer, AR/VR). Experienced working within large, complex existing Unity codebases, integrating Unity with backend services, writing clean maintainable code, and delivering reliable software in Agile team environments.

TECHNICAL SKILLS

Unity and C#: Unity3D (5+ yrs), C#, C++, Unity UI, 3D Applications, Animations, Particle Systems, Physics, WebGL, AR/VR (Oculus, HTC Vive), Mobile (iOS/Android)

.NET and Backend: .NET Framework, WinForms, SQL, REST APIs, WebSocket, Firebase, Backend Service Integration

Architecture and Code Quality: OOP, SOLID Principles, Design Patterns, Clean Architecture, Unit Testing, Code Reviews, Technical Documentation

Tools and Process: Git, GitHub, Perforce, Jira, Agile, Scrum, Technical Documentation

Multiplayer and Networking: Photon Fusion, Photon PUN, BestHTTP, WebSocket, Real-time State Synchronization

WORK EXPERIENCE

Software Engineer | Unity and .NET / C# | **Conovo Technologies** *Oct 2021 – Present*

- Developed and maintained production Unity applications across mobile (iOS/Android), WebGL, AR/VR, and multiplayer platforms including large, complex existing Unity codebases.
- Built real-time multiplayer systems using Photon Fusion and Photon PUN with synchronized state management, lobby systems, and networked player actions.
- Integrated Unity with backend services, REST APIs, WebSocket, and Firebase for live data management, real-time server communication, and authentication.
- Developed 5+ immersive VR applications (CPR training simulation, muscle anatomy viewer, driving simulator) for Oculus and HTC Vive from architecture to delivery.
- Wrote clean, maintainable, well-documented C# code, participated in code reviews and managed Git repositories across concurrent international projects.
- Optimized application performance through memory pooling, LOD, texture compression, and draw call reduction for WebGL and mobile targets.
- Collaborated with international clients and cross-functional teams across the US, UK, Canada, Japan, and Saudi Arabia in Agile environments.

Key projects: *Dynasty of Magi, Meta Clash, Poker Poker, Falcon Strike, Bad Biker, VR CPR Tutorial, Bluestreak Maths*

Software Engineer / Unity Developer | **Fog Technologies** *Oct 2020 – Oct 2021*

- Developed and maintained Unity features for published mobile titles including gameplay systems, particle effects, animations, and UI.
- Worked within existing codebases, extending systems cleanly and maintaining code quality standards across the team.

- Performed mobile asset optimization including texture compression and mesh simplification to reduce memory footprint on iOS and Android.
- Participated in Git-based code reviews and maintained clean version history across team repositories.

Key projects: *PipeHead, Scary Baby, Scary Cat, Baby Simulator*

.NET Developer | **SoftXone Technologies** *Jun 2018 – Jun 2019*

- Built production desktop applications in C# using .NET Framework, WinForms, and SQL including Store Management System and Outpatient Management System, both actively deployed by real clients.
- Designed SQL database schemas, role-based access control, and reporting systems establishing strong backend and software engineering fundamentals.

FEATURED PROJECTS

Project	Stack and Highlights
Poker Poker (Japan, WebGL)	Unity, C#, WebSocket, BestHTTP, Zenject. Real-time multiplayer, backend integration, multi-table live ops
VR CPR Tutorial (Saudi Arabia)	Unity, C#, Oculus/HTC Vive. Physics simulation, full lifecycle VR app, haptic feedback
Bad Biker (Dubai, Mobile)	Unity3D, C#, Photon Fusion, Zenject. Live multiplayer, Agile delivery under deadline
Bluestreak Maths (US, iOS/Android/WebGL)	Unity, C#, REST APIs, WebGL. Cross-platform, backend integration, performance optimization
Meta Clash (Canada, Mobile)	Unity, C#, Firebase. Offline sync, database integration, production mobile game
Store Management System (.NET)	C#, .NET Framework, WinForms, SQL. Production desktop app, actively deployed

EDUCATION

Master of Science in Computer Science *Graduated May 2019*

The Islamia University of Bahawalpur, Pakistan
